Recommendation Letter

This is to recommend Rostislav Devyatov for participation in Summer School "*Structures in Lie Representation Theory*".

I know Rostislav since September 2007. He attended our (joint with Dmitri Timashev) seminar on algebraic groups and invariant theory, and solved all proposed problems. I was really impressed by Rostislav's quick-wittedness and mathematical background. Later I met Rostislav at the summer school "Contemporary Mathematics" (Dubna, Moscow Region). He participated in many courses and his solutions and questions demonstrated a high level of understanding. I have learned that Rostislav is a winner of numerous mathematical olympiads and competitions, he already has original results concerning convex polytopes and some problems in mathematical logic. These results are submitted for publication.

Since September 2008, Rostislav is a student of Higher Algebra Department, and I am his scientific supervisor. He was proposed to study representations of quivers. More precisely, he studies the problem of existence of an open orbit in the representation space for the whole group of automorphisms and for its derived subgroup. During a short period Rostislav became acquainted with path algebras, tame and wild quivers, generic decompositions and Schur's roots. He has obtained some interesting results on tame quivers, and the text is in preparation now.

Rostislav is an active participant of seminars at our department. His recent talk was devoted to V.L.Popov's theorem on a generalized version of Hilbert's 14th Problem. This talk was well-prepared and clearly presented.

In my opinion, Rostislav Devyatov is a very talented and promising young mathematician. I think that he will fully benefit from attending the summer school, and I strongly recommend Rostislav for this event.
