Recommendation Letter

This is to recommend Roman Gayduk for participation in Summer School "*Structures in Lie Representation Theory*".

I know Roman since September 2006. He was among the best students in his academic group. He successfully passed through exams on basic and advanced courses. I may estimate Roman's mathematical education as deep and many-sided.

Since September 2008, Roman is a student of Higher Algebra Department, and I am his scientific supervisor. He studies Geometric Invariant Theory, Representation Theory, algebraic transformation groups and, more precisely, algebraic torus actions. The main task of his work is to compare different constructions producing good quotients for torus actions on Grassmannians.

Roman participates in our seminars and solves proposed problems.

In my opinion, Roman Gayduk is a talented young mathematician. I think that he will benefit from attending the summer school, and recommend Roman for this event.
