LETTER OF RECOMENDATION

It is my pleasure to recommend Aleksandr Kolpakov for participation in the *Summer School "Structures in Lie Representation Theory"* held at *Jacobs University, Bremen, Germany, 09-22, August, 2009.* Aleksandr is very promising young researcher successfully working in the field of geometry of 3-dimensional manifolds and low-dimensional topology.

I know him for more then five years and I am his scientific adviser since 2005. He was one of the best students on Mathematical department of the Novosibirsk State University. In 2007-2008 he was awarded by the prestige Liapunov student's scholarship for excellent study and scientific work.

At this moment he is very active in research. Aleksandr has quite interesting results related rigidity and non-rigidity phenomena in spherical geometry. At present, two of his papers are excepted for publication.

I guess that taking part in the *Summer School* will provide him a nice opportunity to improve his mathematical skills concerning Lie theory and representation theory. Moreover, get acquainted with the modern mathematical theories will make him more experienced in the research.

Aleksandr is very friendly and kind person who, certainly, can be easy adapted to any international community of researches.

I highly recommend to include Aleksandr Kolpakov in the list of participants of the *Summer School "Structures in Lie Representation Theory"* and render a reasonable support for his visit.

Professor Alexander Mednykh
Novosibirsk State University
630090, Novosibirsk, Russia
