Dear Professor Penkov:

Lilit Martirosyan is a second year graduate student at UC Berkeley. She plans to take her qualifying examination in the end of this semester. Lilit takes a reading course with me on Lie algebras and superalgebras based on Humphreys book and Kac's paper. She also studies Shapovalov's paper on finite-dimensional representations of Poisson superalgebras. Next year I plan to start a project with her on classification of representations of infinite-dimensional superalgebras of Cartan type. There are several papers by Kac and Rudakov on this subject but their results are not complete. I hope that it is possible to use the method of odd reflections in this case.

I think that visiting summer school in Bremen will be very beneficial for Lilit. I strongly recommend her for your program.

Sincerely,

Vera Serganova
