Dear Professor Penkov,

Ref: Letter of recommendation to Gordan Radobolja for his application for Summer School: Structures in Lie Representation Theory, August 9-22, 2009, Bremen, Germany.

I have great pleasure in writing recommendation letter for my Ph.D student Gordan Radobolja for his participation in your school.

Gordan Radobolja was born 1982 in Split, Croatia. He received Bachelor degree in 2006 at the Faculty of Mathematics and Natural Sciences, at the University of Split. He graduated as first and best his student generation in Split. Shortly after graduation, he got a position of a teaching assistant at the same faculty, and entered PhD program in Mathematics at the University of Zagreb.

He is now the student of third year of the doctoral studies of mathematics . He passed all required exams and presented many talks at the Algebra seminar in Zagreb. During this year he has started with studying certain topics in representation theory of infinite-dimensional Lie algebras and vertex operator algebra. He will also start soon working on some projects related with his PhD thesis under my supervision. His thesis will be very much related with the theory of vertex operator algebras and W-algebras.

I believe that participation at your Summer School will give to Goradan new insight into representation theory of Lie algebras and its application in mathematics and physics. He will also get opportunity to met some leading experts in the field. Since he has certain background in these topics, I think that he will be able to follow easily lectures at your Summer School.

Sincerly yours,

Dražen Adamović
