13 April, 2009

Dear organizers,

I am writing to support Neil Saunders' application to participate in the Summer School 'Structures in Lie Representation Theory'. Neil is a gifted postgraduate student in our School who expects to submit his PhD thesis later in the year. He is well placed to benefit from the Summer School, the subject of which complements his research to date.

I have known Neil since he took my undergraduate course in Lie algebras in 2005, and I have been the Associate Supervisor of his subsequent PhD research. His thesis work concerns the minimal permutation degrees of various classes of complex reflection groups, including wreath products and Coxeter groups: he has already published and submitted some sections, which may be found on the arXiv.

In parallel with this research, he has been expanding his knowledge of Lie theory and geometric and cohomological methods in representation theory. He will benefit greatly from the chance to hear from the experts in the field, and I strongly support his request to participate in the Summer School and receive financial assistance.

Yours sincerely,

Anthony Henderson
