Organizers fo the Summer School
Structures in Lie Representation Theory

Stuttgart, 15th April 2009

Letter of Recommendation for Sandra Weigl, Stuttgart

Dear colleagues,

Ms Sandra Weigl applies for participation (and financial support) in the Summer School "Structures in Lie Representation Theory" that you organize at Jacobs University Bremen this year.

Ms Weigl has studied Mathematics at Stuttgart and has just finished her diploma thesis on Witt rings over local fields, her final exams are due to take place in the near future. Topics for the exam include Lie theory and algebraic groups. The interest in the topic for the thesis came from classification problems for nilpotent Lie algebras that are pursued in our group at Stuttgart, and also from applications to Tits buildings, in particular, polar spaces.

The diploma thesis is well written, very readable and contains a complete and explicit description for the Witt rings over local fields of characteristic 0, in particular for the most delicate case where the residue field has characteristic 2. She is now planning to start a PhD project, shifting emphasis to topics in representation theory.

Ms Weigl is a very open minded student with remarkable intellectual abilities. The possibility to participate in the summer school would be of great benefit for her in her further studies.

I strongly recommend to give her the opportunity to take part in the summer school.

Yours sincerely

Markus Stroppel
