ERRATA TO "INTEGRABLE BOUNDED WEIGHT MODULES OF LIE SUPERALGEBRAS AT INFINITY"

LUCAS CALIXTO AND IVAN PENKOV

The main purpose of this errata is to correct some inaccuracies that make our classification theorem not quite complete for the case $\mathfrak{sl}(\infty|1)$ (Theorem 5.9). To obtain a complete classification in this case we have to make the following small changes:

(a) p. 14, line -17, after "for a partition $\mu = (\mu_1 \geq \cdots \geq \mu_k)$," add the following sentence: "or $(0^{(\infty)}|0^{(x_n)})$, or $(1^{(n)}|a, 0^{(x_n-1)})$ where $a \in \mathbb{Z}_{\geq 0}$ if $x_n > 1$ and $a \in \mathbb{C}$ if $x_n = 1$."

(b) p. 14, line -15, after "for a partition $\mu = (\mu_1 \geq \cdots \geq \mu_k)$," add the following sentence: "or $(0^{(\infty)}|0^{(x_n)})$, or $(-1^{(n)}|-a, 0^{(x_n-1)})$ where $a \in \mathbb{Z}_{\geq 0}$ if $x_n > 1$ and $a \in \mathbb{C}$ if $x_n = 1$."

(c) p. 15, line 6: replace the sentence "Thus $(\lambda|\gamma) = (1^{(n)}|\gamma)$, and we claim that $\gamma = (a, 0^{(x_n-1)})$ or $\gamma = (-1^{(x_n-1)}, -a)$ for some $a \in \mathbb{Z}_{\geq 0}$" by the sentence "Thus $(\lambda|\gamma) = (1^{(n)}|\gamma)$, and the statement is proved for $x_n = 1$. Assume now that $x_n > 1$. We claim that $\gamma = (a, 0^{(x_n-1)})$ or $\gamma = (-1^{(x_n-1)}, -a)$ for some $a \in \mathbb{Z}_{\geq 0}$"

(d) p. 16, line 6: add the following sentence at the end of this line "If $m = 1$, then M can also be isomorphic to $\mathbf{L}_{\mathfrak{b}(>)}(0^{(\infty)}|a)$ or $\mathbf{L}_{\mathfrak{b}(<)}(0^{(\infty)}|a)$ for $a \in \mathbb{C} \setminus \mathbb{Z}$."

(e) p. 24, line -6: add the following sentence right before the period of this line "$[\mathbf{L}_{\mathfrak{b}(>)}(0^{(\infty)}|a)]$ and $[\mathbf{L}_{\mathfrak{b}(<)}(0^{(\infty)}|a)]$ for $a \in \mathbb{C} \setminus \mathbb{Z}$"

(f) p. 24, line -5: add the following sentence right after the period of this line "Since the weight $(0^{(\infty)}|a)$ for $a \in \mathbb{C} \setminus \mathbb{Z}$ is typical we conclude that $[\mathbf{L}_{\mathfrak{b}(<)}(0^{(\infty)}|a)] = \{\mathbf{L}_{\mathfrak{b}(<)}(0^{(\infty)}|a)\}$ and $[\mathbf{L}_{\mathfrak{b}(>)}(0^{(\infty)}|a)] = \{\mathbf{L}_{\mathfrak{b}(>)}(0^{(\infty)}|a)\}$."
